"AI and the Safety Professional"

(part 3 of 3)

Finally, Part 3 of 3 will list and describe, basically, some AI tools and programs specifically for workplace safety management that assist safety professionals in making better, more informed decisions based on more available data and the accompanying AI data analysis allowing for more informed and quicker decisions.

These AI tools cover predictive analytics, real-time hazard detection, PPE monitoring, compliance automation, and immersive training, making them useful for improving safety management systems.

"Winter Weather Hazards and Precautions"

In addition to cold weather stress, there are other winter weather-related hazards that workers may be exposed to when performing tasks such as driving in the snow, removing snow from rooftops, and working near downed or damaged power lines. OSHA listed on their website on the Winter Weather Safety and Health Topics page, ten common winter weather-related tasks and hazardous conditions along with their precautions to keep workers safe when performing these tasks or working in these hazardous conditions.

More information is available on the on the page and link below:
